## Section 1 - CONFLICT MINERALS DISCLOSURE

### Item 1.01 and 1.02 CONFLICT MINERALS DISCLOSURE AND REPORT; EXHIBIT

In accordance with Rule 13p-1 under the Securities Exchange Act of 1934, as amended, Weatherford International plc (“*Weatherford*”) evaluated its supply chain to determine if conflict minerals, defined as columbite-tantalite (coltan), cassiterite, gold, wolframite, or their derivatives tantalum, tin, and tungsten, were used in the production or functionality of products manufactured or contracted for manufacture by Weatherford in calendar year 2021.

#### *Conflicts Mineral Disclosure*

A copy of this Form SD and the Weatherford Conflict Minerals Report, filed as Exhibit 1.01 hereto, may be found on our website at [www.weatherford.com](http://www.weatherford.com) under “Investor Relations” and “SEC Filings.”

## Section 2 - EXHIBITS

### Item 2.01 EXHIBITS

[Exhibit 1.01](#) - Conflict Minerals Report as required by Items 1.01 and 1.02 of this Form.

## SIGNATURE

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the duly authorized undersigned.

### WEATHERFORD INTERNATIONAL PLC

Date: May 31, 2022

/s/ Scott C. Weatherholt

Scott C. Weatherholt

Executive Vice President, General Counsel and Chief Compliance Officer

**Weatherford International plc**  
**Conflict Minerals Report**  
**For the Year Ended December 31, 2021**

This Conflict Minerals Report of Weatherford International plc (“**Weatherford**,” “**we**,” “**our**” or the “**Company**”) is in accordance with Rule 13p-1 (the “**Rule**”) under the Securities Exchange Act of 1934, as amended.

### **Company Overview**

Weatherford is a leading global energy services company providing equipment and services used in the drilling, evaluation, well construction, completion, production, intervention and responsible abandonment of wells across the broad spectrum of energy sources. Many of our businesses, including those of our predecessor companies, have been operating for more than 50 years. We conduct operations in approximately 75 countries, answering the challenges of the energy industry with 350 operating locations including manufacturing, research and development, service, and training facilities.

We are committed to a culture of compliance and to tracing the origins of our necessary conflict minerals to ensure that we are sourcing materials and components from companies that share our values and commitment to human rights, ethics and environmental responsibility. Weatherford supports efforts to increase transparency regarding conflict minerals and to eliminate their use. As a result, we adopted due diligence procedures consistent with the Organisation for Economic Co-operation and Development (“**OECD**”) guidelines and seek to obtain chain of custody declarations from all Weatherford suppliers of columbite-tantalite (coltan), cassiterite, gold, wolframite, or their derivatives (which are limited to tantalum, tin, and tungsten) (“**conflict minerals**” or “**3TG**”) incorporated into products manufactured or contracted for manufacture by Weatherford in accordance with our obligations pursuant to the U.S. Dodd-Frank Wall Street Reform and Consumer Protection Act and the Rule.

### **Covered Products Overview**

Our principal business is to provide equipment and services to the oil and natural gas exploration and production industry as well as new energy platforms across our three product line segments: (1) Drilling and Evaluation (2) Well Construction and Completions, and (3) Production and Intervention. Effective in the fourth quarter of 2021, Weatherford realigned our reporting structure to these three product line segments to further refine the Company’s organizational focus and business strategy around the well life cycle and is intended to drive improved customer collaboration and growth opportunities. The alignment of our management strategy and reporting structure allows us to further drive organizational priorities into our operating processes. All of our segments are enabled by a full suite of digital, monitoring, optimization and artificial intelligence solutions providing services throughout the well life cycle, including responsible abandonment.

- Drilling and Evaluation (“DRE”) offers a suite of services including managed pressure drilling, drilling services, wireline and drilling fluids. DRE offerings range from early well planning to reservoir management through innovative tools and expert engineering to optimize reservoir access and productivity.
- Well Construction and Completions (“WCC”) offers products and services for well integrity assurance across the full life cycle of the well. The primary offerings are tubular running services, cementation products, completions, liner hangers and well services. WCC deploys conventional to advanced technologies, providing safe and efficient services in any environment during the well construction phase.
- Production and Intervention (“PRI”) offers production optimization technologies through the Company’s ability to design and deliver a complete production ecosystem to boost productivity and responsible abandonment for our customers. The primary offerings are intervention services & drilling tools, artificial lift, production automation & software, sub-sea intervention and pressure pumping services in select markets. PRI utilizes a suite of reservoir stimulation designs, and engineering capabilities that isolate zones and unlock reserves in conventional and unconventional wells, deep water, and aging reservoirs.

We have evaluated each of our product lines and made a good faith determination that conflict minerals were necessary for the production or functionality of some products manufactured or contracted for manufacture by Weatherford in calendar year 2021 (the “**Covered Products**”). Our Covered Products include, but are not limited to:

- |                               |                             |                            |
|-------------------------------|-----------------------------|----------------------------|
| • liner hanger systems,       | • inflatable packers,       | • drilling casing bits,    |
| • fishing recovery tools,     | • casing packers,           | • centralizers,            |
| • rotating cement heads,      | • thru-tubing equipment,    | • float equipment,         |
| • downhole deployment valves, | • wellbore tubulars,        | • stimulation sleeves,     |
| • pressure control equipment, | • casing and running tools, | • expandable sand screens, |

- composite plugs,
- inflow control devices,
- gravel pack systems,
- production packers,
- isolation valves,
- RFID enabled tools,
- subsurface safety valves,
- pressure pumping systems,
- continuous rod products,
- gas lift valve systems,
- rotaflex pump units,
- gas lift systems,
- power generation units,
- reciprocating rod lifts systems,
- flow measurement products,
- SurgeMaster® II tool,
- drilling rental tools,
- performance drilling tools,
- mechanized rig equipment,
- conventional tubular running equipment,
- pump and fluid systems,
- well servicing equipment,
- logging while drilling equipment,
- measurement while drilling equipment,
- directional drilling equipment,
- rotary steerable systems,
- managed pressure drilling systems,
- rotating control devices,
- advanced flow detection systems,
- steady state continuous flow systems,
- under-reamers,
- open hole logging tools,
- cased hole logging tools,
- automated tubular running equipment,
- downhole pressure, temperature and flow measurement gauges,
- distributed fiber optics systems,
- stage tools,
- industrial pump systems,
- sub-surface plugs,
- artificial lift controllers,
- drill pipe risers,
- flowbank tanks, and
- surface manifolds

### ***Supply Chain Overview***

Our global supply chain function is responsible for sourcing, procurement, supply and operations planning, and inventory management of raw materials, inventory, finished goods, and services to support the Company's operations. We have more than 19,000 suppliers in eight geographic regions globally. The major categories in our supply chain are machining services, field equipment manufacturers, raw materials, and employee benefits services. More than 40% of our suppliers are based in North America.

Weatherford's global supply chain is complex with multiple levels of suppliers between us and upstream conflict minerals producers. Further, our Covered Products consist of many component materials and parts, with multiple suppliers potentially contributing to a single product. As a downstream purchaser and user of conflict minerals, we do not have direct visibility into, and are always many layers removed from, smelters or refiners of 3TG ("**SORs**") and the associated mines of origin of the conflict minerals. Therefore, we must rely on our direct suppliers ("**tier 1 suppliers**") and their suppliers ("**tier 2 suppliers**") to provide the information necessary to trace the source and chain of custody of 3TG that may exist in our Covered Products.

### ***Reasonable Country of Origin Inquiry (RCOI)***

We continually strive to make improvements to our RCOI program and processes to help us manage the risk that conflict minerals from the Democratic Republic of the Congo or adjoining countries ("**DRC**") are used in our Covered Products. We start our RCOI using automated processes to identify Covered Products based on information in our various computer systems, including material safety data and engineering design product information. We then take the data from the automated process and manually review and validate the data and reports. From these reports, we identified specific product or products supplied to Weatherford that may contain 3TG and the corresponding direct suppliers in our manufacturing businesses supply chain. To allow us to identify both higher and lower risk suppliers, we further categorized these direct suppliers both by the types of products or services they supply to Weatherford and the by the total spend with each supplier. This review and categorization enabled us to refine the scope of the suppliers we reasonably believe are covered by the Rule. This year, our review identified 851 tier 1 suppliers within the scope of the Rule for 2021. This represents approximately a 27% increase in the number of tier 1 suppliers within the scope of the Rule from 2020. The increase was the result of global logistical and distribution challenges related to the COVID-19 pandemic as well as a shift to sourcing more items locally to improve efficiency in our supply chain. We continue to evaluate our supply chain for opportunities to further improve efficiency in our operations, gain a better understanding into our tier 2 suppliers, and improve reporting and compliance with our conflict minerals policies.

Weatherford, with the assistance of a third-party consultant, contacted the 851 tier 1 suppliers to request and collect information about the use and origin of 3TG used in the products and components supplied to Weatherford. Utilizing the Conflict-Free Sourcing Initiative's Conflict Minerals Reporting Template ("**CMRT**"), suppliers were asked to provide information regarding the existence of 3TG in specifically identified materials and products sold to Weatherford and the sourcing of these materials, with the ultimate goal of identifying the SORs and associated mine countries of origin connected to 3TG utilized in our products and components. Suppliers were provided multiple options for uploading CMRTs or providing the requested information. To facilitate reporting at the product-level, Weatherford identified the products and components being sourced from a given supplier and this was communicated to that supplier as part of the data request. The suppliers were asked to select a given product or set of products for which a CMRT was being submitted. Suppliers were able to submit multiple CMRTs as needed to address all indicated products. If a supplier was unable to provide one or more product-specific CMRTs, the supplier could choose to provide a company-level or user-defined CMRT. Suppliers unable to provide a CMRT on their own behalf were requested to provide relevant information on their tier 2 suppliers. We then contacted these tier 2 suppliers, and

subsequent tiers of suppliers as needed. Every effort was made to address and meet the concerns of suppliers regarding their need to maintain the confidentiality of their data and our third-party consultant executed non-disclosure agreements with Weatherford's suppliers when requested.

If suppliers did not respond to our request for information, our third-party consultant made multiple additional attempts to contact them via emails and telephone calls and offered assistance in completing the CMRTs and providing the requested information. Through our engagement and outreach to our suppliers, we continued to inform, educate and assist our suppliers if they are unfamiliar with conflict mineral rules, Weatherford's conflict minerals compliance program, our related policies and the supplier's obligations under their contracts with Weatherford and our Supplier Code of Conduct. If, after these efforts, a supplier still did not register within the system or provide the information requested, the matter was further escalated internally and there was direct outreach by Weatherford employees in our supply chain function that have direct business interactions with the tier 1 suppliers.

### *RCOI Results*

This reporting year, 625 suppliers, or approximately 73%, responded to our request to provide CMRTs, slightly better than the 70% response rate we achieved last year. We attribute the increased response rate to our internal efforts to educate our global employees on our conflicts minerals policies combined with the outreach efforts of our supply chain function that has direct business interactions with the suppliers. Of the suppliers who responded, 32% indicated one or more conflict minerals are necessary to the functionality or production of our Covered Products. Based on our RCOI, we have reason to believe that conflict minerals necessary to the functionality or production of our Covered Products may have originated in the DRC. We performed additional due diligence measures on the source and chain of custody of the necessary conflict minerals in our Covered Products, as described below.

### *Due Diligence*

#### *Design*

The design of Weatherford's due diligence framework conforms to the due diligence-related steps of OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas, second edition ("**OECD Guidance**").

#### *Measures Undertaken*

Once we received information from suppliers in the CMRTs, we evaluated responses for plausibility, consistency, and gaps in information. If, during the evaluation, any quality control flags were raised regarding the veracity or accuracy of information, suppliers were automatically contacted again on a bi-weekly basis up to an additional three times to confirm or verify the information. Examples of quality control flags are:

- One or more SORs were listed but no conflict mineral was listed by the supplier;
- SOR information was not provided for a conflict mineral used by the supplier, or the listed SOR was not a verified metal processor in the database of our third-party consultant;
- Supplier answered yes to sourcing from the DRC, but none of the SORs listed are known to source from the region;
- Supplier indicated that they have not received 3TG data for each metal from all relevant suppliers;
- Supplier indicated that they have not identified all of the SORs used for the Covered Products;
- Supplier indicated they have not provided all applicable SOR information received; and
- Supplier indicated 100% of the 3TG for products covered by the declaration originated from scrap/recycled sources, but one or more SORs listed are not known to be exclusive recyclers.

With the supplier information collected and evaluated as described above, we used information collected by industry groups and our third-party consultant to verify the identified SORs. Through an outreach process we attempted to verify (1) the types of metal processing performed (including exclusive recycling), (2) the mine countries of origin of the conflict minerals, (3) the conflict-free certification status of the identified SORs, and (4) the due diligence measures being conducted for those entities that are not conflict-free certified. We compared the supplier-identified SORs to the list of SORs which have received a "conflict free" designation based on internationally accepted audit standards of (a) the Responsible Minerals Assurance Process developed by the Responsible Minerals Initiative, (b) the London Bullion Market Association Good Delivery Program and (c) the Responsible Jewellery Council Chain-of-Custody Certification. If the SOR was not certified by one of these three internationally-recognized programs, we attempted to contact the SOR to gain more information about its sourcing practices, including countries of origin and transfer, and whether there were any internal due diligence procedures in place or other processes the SOR takes to track the chain-of-custody on the source of its mineral ores. We also performed internet research to determine whether there were any outside sources of information regarding the SOR's sourcing practices. If the SORs were non-responsive, additional attempts to contact them were made to gather information on mine country of origin and sourcing practices.

## ***Due Diligence Results***

Based on the SOR list provided by the suppliers who responded at the product-level and based on publicly available information, we have identified 342 verified SORs that are within our supply chain (see Annex I). Of these SORs, 289 do not source from the DRC and 53 indicated sourcing within the DRC. Of these 53 SORs, all but six are certified as conflict-free. Three of these six uncertified SORs reported that they are in the process of obtaining their “conflict-free” certification or designation from one of the above recognized international organizations. We will monitor their ongoing progress on obtaining their conflict-free certification. Two of the six SORs that are not certified as conflict-free supplied gold that was used in our Covered Products. One of these two gold SORs reported that they do not know the country of origin for their supply of gold, and made a similar report in prior years. The second gold SOR reported that they source their gold from the DRC as well as 15 other non-DRC countries. The one other SOR that is not certified as conflict-free supplied tin that was used in our Covered Products and that it sources its tin from a covered country along with six other non-DRC countries. We will be performing additional due diligence and outreach with the suppliers linked with all of the SORs that are not certified as conflict-free regarding their sourcing methods for products and components sold to Weatherford. We will also work with our suppliers associated with these three SORs to further validate the country of origin of the conflict minerals used in our Covered Products.

## ***Measures for Improvement***

Weatherford’s conflict minerals policy was amended and restated on May 26, 2021 can be found at [https://www.weatherford.com/documents/corporate-documents/governance-and-policies/conflict-minerals-policy-\(november-2013\)/](https://www.weatherford.com/documents/corporate-documents/governance-and-policies/conflict-minerals-policy-(november-2013)/). The policy is also included within our Supplier Code of Conduct which can be found at <https://www.weatherford.com/en/documents/corporate-documents/supplier-code-of-conduct/supplier-code-of-conduct-english/>. We continue to require all new suppliers from whom Weatherford procures raw materials and components used in Weatherford’s manufacturing operations to agree to the Supplier Code of Conduct (which stresses our commitment to integrity throughout the supply chain and holding our business partners to the same high standards and commitment to a culture of compliance) and to complete a CMRT as part of the terms and conditions of doing business with Weatherford. We are in the process of formalizing and documenting our internal procedures to validate compliance with our Supplier Code of Conduct and vendor on-boarding including creating an escalation path within our supply chain and up to executive officers when vendors fail to provide CMRTs or are identified as utilizing SORs that are not certified as conflict free or sourcing from locations other than the DRC.

Weatherford continues to refine and improve its processes related to the scoping of suppliers covered by the Rule and the tracing and responsible sourcing of 3TG. Future steps to mitigate and address the risk that 3TG contained in our Covered Products could directly or indirectly finance or benefit armed groups in the DRC may include, but are not limited to:

- Strengthen the quality of supplier data and product data to more accurately identify 3TG in our Covered Products and supply chain and allow increased automation of the identification of Covered Products;
- Engage with our engineering, manufacturing, supply chain and IT departments to assure that information regarding 3TG used in our Covered Products is input, tracked and maintained ;
- Engage with our engineering and design departments to minimize the use of 3TG in the designs of our Covered Products to those where its use is absolutely necessary;
- Document and formalize our revised internal procedures regarding the collection of information relating to the use of 3TG in our Covered Products;
- Improve our ability to identify and trace 3TG to the SORs and associated countries of origin;
- Continue to engage with our suppliers to provide ongoing education regarding 3TG, Weatherford’s conflict minerals policy and Weatherford’s Supplier Code of Conduct and to encourage or require their sourcing from conflict-free SORs;
- Develop and implement standard remediation practices to address suppliers or SORs identified as areas of concern;
- Continue to make our ethics and reporting hotline, Listen Up, available to all suppliers anytime and from anyplace to allow them to notify us of any failure to comply with our Supplier Code of Conduct or any illegal or unethical activity related to our business;
- Take affirmative steps to learn and understand new developments and best practices in connection with the Rule, OECD Guidance and conflict minerals compliance program design and implementation; and
- Maintain and update our centralized internal repository containing materials related to our conflict minerals program as a resource for all employees.

This report includes forward-looking statements that involve risks and uncertainties. Forward-looking statements provide current expectations of future events based on certain assumptions and include any statement that does not directly relate to any historical or current fact. Forward-looking statements can also be identified by words such as “expects,” “plans,” “intends,” “will,” “may,” and similar terms. Forward-looking statements are not guarantees of future performance. Weatherford assumes

no obligation to revise or update any forward-looking statements for any reason, except as required by law. Subsequent events may affect Weatherford's future determinations under Rule 13p-1 of the Securities Exchange Act of 1934, as amended.

## Annex I

The table below is an aggregation of data provided by Weatherford's suppliers through April 15, 2022 and lists SORs within our supply chain that either do not source 3TG from the DRC or for which we were unable to validate the region of sourcing.

Metal	Official Smelter Name	Conflict-Free Certifications	Mine Countries of Origin
Gold	8853 S.p.A.	RMAP	No known country of origin

The table below is an aggregation of data provided by Weatherford's suppliers through April 15, 2022 and lists SORs within our supply chain that may source 3TG from the DRC. For reporting year 2021, all but six of these SORs are certified as conflict-free. Three of the six SORs are in the process of obtaining their certification. The other three exceptions are: one gold SOR that is located in a covered country with no known country of origin for its conflict minerals, one gold SOR that sources its gold from a covered country along with fifteen other non-DRC countries, and one tin SOR that sources its tin from a covered country along with six other non-DRC countries.
